Naughty or not — User Quick-Start Guide

Desktop Sanctions & Aviation Compliance Screening | Version 1.0.0

WARNING: TEST VERSION — FOR INTERNAL EVALUATION ONLY.
OpenSanctions data is licensed CC BY-NC 4.0; commercial use requires a separate licence from OpenSanctions. This tool provides preliminary screening assistance and must NOT be solely relied upon for binding transaction or onboarding decisions. All potential matches must be verified against official government registers and escalated according to your organization's Sanctions Compliance Policy.

1. Screening Modes Overview

The application provides three specialized modes accessible via top-level tabs:

Mode	Purpose & Description	When to Use
Name Check	Primary screening mode. Runs fuzzy and phonetic matching against 14 official sanction, export-control, aviation safety, and terrorism registries. Applies intelligent legal suffix stripping and secondary identifier validation.	Screening individuals, companies, airlines, vessels, or aircraft tail numbers.
Text Search	Deep full-text search across raw original registers using SQLite FTS5. Allows exact phrases, wildcards (*), and boolean queries (AND, OR, NOT) across all unindexed record fields.	Investigating addresses, passport numbers, IMO numbers, or unstructured notes.
Manual Check	Structured logging interface for four-eyes compliance review. Records analyst decisions, rationale, verification links, and clearance status with append-only tamper-evident audit trail.	Documenting false positives, approvals, or escalation outcomes.

2. Step-by-Step Screening Workflows

How to Run a Name Check:

1. Select entity category: *Person*, *Organisation*, *Airline*, *Aircraft*, or *Vessel*.
2. Enter full legal name or registration identifier. Enter optional secondary fields (DOB, Country) if known.
3. Click **Screen Entity** or press Enter. Review the summary banner and individual source indicators.
4. Download official audit documentation via **Download PDF** or **Download Excel**.

How to Run a Text Search:

1. Switch to the **Text search** tab. Enter keyword, address, or identifier (e.g. *"Khimki"* or *9239458*).
2. Select exact source list or check all lists. Press Enter or click **Search Records**.
3. Inspect matched raw record snippets with highlighted match terms.

How to Complete a Manual Review:

1. In **Manual check**, select the target entity. Review past check history and matched hits.
2. Document analyst identity, disposition (*Cleared* or *Escalated*), and detailed justification.
3. Click **Save Manual Review Decision** to commit the immutable compliance record.

3. Status Badges & Match Tiers Explained

Results are categorized into standard color-coded match tiers:

Badge	Tier	Score / Criteria	Required Compliance Action
RED	**Potential Match**	Score >= 0.80 or exact core name match	**STOP.** Immediate freeze on transaction. Verify on official source and escalate to Head of Compliance.
AMBER	**Possible Match**	Score 0.70 - 0.79 or close phonetic alias	**REVIEW.** Compare secondary identifiers (DOB, nationality, address). Obtain four-eyes sign-off.
INFO	**Sub-Threshold**	Score 0.50 - 0.69 (informative only)	Informational only. Does not alter overall banner. Verify if high-risk jurisdiction is involved.
GREEN	**No Match**	All sources checked; score < 0.50	Clear to proceed subject to standard business approvals.
WHITE	**Incomplete**	One or more sources offline / corrupt	**FAIL-SAFE:** Incomplete screen. Investigate missing source before transaction approval.
YELLOW	**Advisory Flag**	Aviation safety list or FATF grey list	Regulatory or operational risk. Apply enhanced due diligence.

4. Hit Escalation Procedure

Whenever a **RED** or **AMBER** candidate is flagged, follow this mandatory 4-step protocol:

Step 1 — Independent Official Verification: Click the *Verify on official source* button next to the candidate. Verify whether the target entity is genuinely the designated party on the government website.

Step 2 — Secondary Identifier Comparison: Check dates of birth, registration numbers, parent companies, and known aliases. If identifiers conclusively rule out the subject, document the false positive in Manual check.

Step 3 — Escalate Under Sanctions Policy: If the entity cannot be definitively cleared, immediately notify the Sanctions Compliance Officer. Do not notify the customer or tip off counterparties.

Step 4 — Retain Audit Trail: Export PDF and Excel reports. Records are stored automatically in %LOCALAPPDATA%\NaughtyOrNot\ for 10-year statutory retention.

5. Data Privacy, Storage & IT Support

Zero Data Leakage: All names and query text are processed 100% locally in-process. No search data ever leaves your computer, except when you explicitly choose to check the optional hosted OpenSanctions API.

Storage Locations: Application data, local sanction lists, logs, and generated reports reside in %LOCALAPPDATA%\NaughtyOrNot\. Use the *Open reports folder* or *Open logs folder* buttons in Settings to view your files.

Technical Assistance: If an error occurs, click **Copy details for IT** and email the incident reference to your IT support team.
